                                                                                                                                                                                                                                                                                     -:- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate + {RNA}(N).
-:- SUBCELLULAR LOCATION: Nuclear.
-:- SUBCELLULAR LOCATION: Nuclear.
-:- FTM: The tandem 7 residues repeats can be highly phosphorylated.
-:- MISCELLANBOUS: Three distinct 2inc-containing RNA polymerases were found in evkaryotic nuclei: polymerase I for the ribosomal RNA precursor, polymerase II for the mRNA precursor, and polymerase III for SS and tRNA genes.
-:- SIMILARITY: Belongs to the RNA polymerase beta' chain family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PROGUTE; PROCEED TO THE PER PROPERTY 23.

G. Jaggedl, Jaggedz and Deltal to regulate cell-fate determination.

Upon ligand activation through the released notch intracellular
domain (NICD) it forms a transcriptional activator complex with

RBF-J kappa and activates genes of the enhancer of split locus.

Affects the implementation of differentiation and
apoptotic programs (By similarity). Acts instructively to control
the cell fate determination of CNS multipotent progenitor cells,
resulting in astroglial induction and neuron/oligodendrocyte
                                                                                                                                                                                                                                                                                  62

C. I-FUNCTION: CIRCADIAN REGULATOR THAT MAY ACT AS A TRANSCRIPTION
EACTOR. BEHAVES AS A NEGATIVE ELEMENT IN CIRCADIAN TRANSCRIPTION
EACTOR. BEHAVES AS A NEGATIVE ELEMENT IN CIRCADIAN TRANSCRIPTIONAL
EACTOR. BEHAVES AS A NEGATIVE ELEMENT IN CIRCADIAN TRANSCRIPTIONAL
ELOOP. DOES NOT APPEAR TO BIND DMA, SUGGESTING INDIRECT
TRANSCRIPTIONAL INHIBITION. EXPRESSION OSCILLATES WITH A 24 HR
HAYTHM IN THE SUPRACHIASMATIC NUCLEUS (SCN) AND THE WHOLE EYES.
COSCILLATIONS ARE MAINTAINED UNDER CONSTANT DARKNESS AND ARE
RESPONSIVE TO CHANGES OF THE LIGHT/DARK CYCLES. THERE IS A 4 HOUR
TIME DELAY BETWEEN PERL AND PERZ OSCILLATIONS. THE EXPRESSION
RHYTHMS APPEAR TO ORIGINATE FROM REITHA (BY SIMILARITY).

C. I-STUDIAN SAPEAR ADMAINS AND AREA (SCH) AND ADMAINS.
C. I-STUDIANTY: Belongs to the basic helix-loop-helix (bHLH) family of
C. I-STMILARITY: Contains 1 PAS-associated C-terminal (PAC) domain.
                                                                                                                                                                                                                                                                                                                         110 PRPGPXPAP----RPAPAAPA---------PAAPEFTAPPSAPAAASGP 149

SIMILARITY: Belongs to family 10 G-protein coupled receptors. Highest to other tachykinins receptors. CAUTION: Was originally (Ref.1) thought to be a kappa-type opioid teceptor and to originate from human. Ref.2 showed that it is a tachikin receptor and was termed NX-4R. Ref.3 shows that it is a from guinea pig and is NX-3R.
                                                                                                                        SEQUENCE FROM N.A., AND SHOWS THAT IT IS NOT A HUMAN SEQUENCE. Page N.M., Bell N.J.; "The human tachykinin NK1 (short form) and tachykinin NK4 receptor: a
